## Great expectations

Today's demanding customer expects innovative technology, especially in luxury hotels. Jerry Sun of **SmartLiving Technologies** talks about bringing its high-end products to Europe.

**H**otels know customers are demanding more for their money and expect to find the latest technology wherever they stay. While hoteliers recognise that by implementing the latest trends in technology they are staying ahead in a competitive market, finding providers to meet their specific requirements can still be a challenge. "It's a difficult service to find in the industry," says Jerry Sun, CEO of SmartLiving Technologies. "Not many technology companies will develop something specifically for the hotel space, so we have been filling that gap. SmartLiving Technologies build several products according to the hotel environment."

### High standards

Sun says it is vital that luxury hotels in particular work to exceed guests' expectations. If not, the hotel could suffer, not only in its service to guests, but in information management as well. "We find that many hotels use equipment that is not up to the high standard we provide – sometimes the hotel has been misled," Sun adds. "When a company proposes a product it's tricky to determine whether it's good or not. SmartLiving Technologies always provides a better system than the one the hotel currently has in place, for guests and staff."

Established in 2005, SmartLiving Technologies offers solutions in automation, digital audio and video, media networking and mood lighting. The company is well established in Hong Kong, and is becoming more active in Macau and mainland China. In 2010, it completed a project for the Mandarin Oriental in Macau that included a high-end IRES, public area media and A/V installation.

"Now, SmartLiving Technologies is doing overseas projects, and we're going along with Mandarin Oriental Hotel Group to do this," Sun continues. "This has been excellent for us. Mandarin Oriental has allowed us to go further, together with their team, and they have introduced our services to their Europe hotels so we have some exposure. We have had very good feedback from many Mandarin Oriental hotels in Europe and we're going further into the European market."

### A local base

"With Mandarin Oriental Hotels, we've started to work in Geneva, Milan and London," Sun adds. "We're now building another system for the Mandarin Oriental, Paris. We understood that to provide such a high level of service for our customer, we needed to have a team in Europe. We decided to open another SmartLiving Technologies in Berlin and we have just finished our registration. This new company will provide a better, more comprehensive solution for our European clients."

SmartLiving Technologies continues to develop its product range, and is a platinum member of Hotel Technology Next.

SmartLiving Technologies collaborated with the Mandarin Oriental in Macau.

Generation, a not-for-profit trade association serving hotel companies and technology providers. It offers new industry information and SmartLiving Technologies also contributes its knowledge and experience as well.

### Innovative technology

In 2005, the company designed the first hotel-used digital amplifier, SmartHarmony Professional – DM1818. This product combines energy saving, power safety and high-end sound quality. SmartLiving Technologies recently introduced the first Digital Living Network Alliance (DLNA) digital amplifier. The new wireless version, which is being implemented in high-end hotels, has a built-in antenna providing a direct, simple connection and comes with one additional audio input enabling the integration with the AV system. "The sound quality is extremely good, which is important for us," Sun says. "Hotel guests can experience hi-fi quality audio, not at all similar to the sound usually experienced from an electronic radio. The digital amplifier is built in an aluminium case, and as it is fully shielded interference is drastically reduced."

### Meeting requirements

SmartLiving Technologies has been set up to offer clients the finest products, which are also flexible and cost-efficient. "Our products are custom made," Sun concludes. "We modify the features to meet our client's requirements so if they don't need something then we won't include it. We are very dedicated and focussed. We want our products to be the best." ■
